

Hamid Yeganeh

Front-End Developer | React & Next.js Developer

+98 938 372 9627 | hamidyeganeh82@gmail.com | github.com/hamidYeganeh | linkedin.com/in/hamidYeganeh | Tehran, Iran

PROFESSIONAL SUMMARY

Front-End Developer with 4+ years of experience delivering production web applications, dashboards, and admin platforms with React, Next.js, and TypeScript. Built and maintained 8+ production admin panels and landing pages, including role-based access control, complex form workflows, real-time features, internationalization, and REST API integrations. Reduced one platform's client bundle from 700 KB to 140 KB (approximately 80%) through code splitting, lazy loading, and bundle analysis.

TECHNICAL SKILLS

Core: HTML5, CSS3, JavaScript (ES6+), TypeScript

Frameworks/Libraries: React, Next.js (App Router, Pages Router, SSR, SSG, SEO), Redux, Redux Toolkit, Zustand, RTK Query, React Query, React Hook Form, Zod, next-intl, Socket.IO

Styling: Tailwind CSS, Sass/SCSS, Styled Components, shadcn/ui, Radix UI, Material UI, Ant Design

Tools: Git, GitHub, GitLab, Storybook, Turborepo, NX, Figma, Docker, CI/CD, Sentry, Postman, Swagger

Testing/Performance: Jest, React Testing Library, Lighthouse, code splitting, lazy loading, memoization, bundle analysis

Frontend Practices: Responsive Web Design, REST API integration, RBAC, JWT/OAuth, PWA, Service Workers, feature-based architecture, monorepo, component-driven development, i18n/localization

PROFESSIONAL EXPERIENCE

Bareach | Front-End Developer | *Mar 2026 - Present | Tehran, Iran*

- Develop and maintain a transportation operations dashboard with Next.js App Router and TypeScript, using feature-based architecture to isolate 10+ independently maintainable modules.
- Build complex multi-step forms with React Hook Form and Zod; manage server and client state with React Query and Zustand across critical workflows.
- Implement RBAC guards, Sentry production monitoring, internationalization with next-intl, and base unit tests with Jest and React Testing Library.

Arshco | Front-End Developer (promoted from Intern in 6 months) | *Dec 2021 - Mar 2026 | Tehran, Iran*

- Built and maintained 8+ production admin panels and landing pages while coordinating directly with backend engineers and product owners.
- Developed reusable UI component libraries that standardized product interfaces and supported faster feature delivery across multiple applications.
- Integrated REST APIs and implemented authentication and authorization workflows with JWT and OAuth across production applications.

EDUCATION

Shamsipour Technical and Vocational College | Bachelor of Science in Computer Engineering (in progress)

SELECTED PROJECTS

BizMLM - Network Marketing & Commerce Platform | bizmlm.ir

Problem: A legacy, multi-module platform required better frontend scalability, reuse, localization, and load efficiency.

Action: Contributed across 6+ modules in a Turborepo monorepo; migrated legacy pages, introduced next-intl localization, and documented shared components in Storybook.

Technologies: Next.js Pages Router, TypeScript, Redux, Styled Components, Turborepo, Socket.IO, Storybook, ECharts, GSAP, PWA.

Result: Reduced the client bundle from 700 KB to 140 KB (approximately 80%) through code splitting, lazy loading, targeted refactoring, and bundle analysis.

Eqipo - Real Estate Crowdfunding Platform | eqipo.ir

Problem: Investors and administrators needed a consistent public site, secure dashboard workflows, and efficient investment-data exploration.

Action: Built responsive landing, dashboard, and content areas; implemented RBAC, sortable/filterable/paginated data tables, PWA service workers, and offline support.

Technologies: Next.js App Router, TypeScript, Tailwind CSS, Redux Toolkit, Radix UI, React Table, Framer Motion, PWA.

Result: Delivered a unified responsive experience across public and authenticated product areas while supporting permission-based access and offline behavior.

Bareach - Transportation Operations Dashboard | bareach.com

Problem: A transportation workflow required a maintainable dashboard architecture, complex validated forms, reliable data synchronization, and production observability.

Action: Architected 10+ feature modules; built dynamic multi-step forms; integrated React Query and Zustand, RBAC guards, Sentry monitoring, i18n, and component tests.

Technologies: Next.js App Router, TypeScript, Tailwind CSS, shadcn/ui, React Hook Form, Zod, React Query, Zustand, Sentry, Jest, React Testing Library.

Result: Standardized validation and module boundaries so features could be developed, tested, and extended independently, with faster production-issue detection through Sentry.

Greenkeeper - Environmental Certificate Platform | greenkeeper.eco

Problem: The product needed distinct user, admin, organization, and landing experiences connected to a microservice backend for international users.

Action: Developed four product areas, integrated multiple backend services with RTK Query, and built a reusable component system with German and English localization.

Technologies: Next.js Pages Router, TypeScript, Tailwind CSS, shadcn/ui, Redux, RTK Query, Framer Motion, microservice architecture.

Result: Delivered bilingual product surfaces and a scalable data-access and component foundation across multiple service boundaries.

Royan Cancer - Medical Research Institute Website | royancancer.org/

Problem: A medical institute needed a fast, discoverable, accessible public website and maintainable article publishing experience.

Action: Built responsive landing and article listing/detail pages with server-side rendering and structured dynamic content.

Technologies: Next.js App Router, Tailwind CSS, server-side rendering, dynamic content.

Result: Improved search visibility and initial rendering through SSR while maintaining readable layouts across devices.
