

Hamid Yeganeh

Front-End Developer | React & Next.js Developer

+98 938 372 9627 | hamidyeganeh82@gmail.com | github.com/hamidYeganeh | linkedin.com/in/hamidYeganeh | Tehran, Iran

PROFESSIONAL SUMMARY

Front-End Developer with 4+ years of experience delivering production web applications, operational dashboards, admin platforms, and public websites with React, Next.js, and TypeScript. Develops frontend features end-to-end across architecture, responsive UI, API integration, state management, access control, testing, production monitoring, and deployment. Built and maintained 8+ production admin panels and landing pages and contributed to large multi-module platforms with real-time and multilingual experiences. Reduced one platform's client bundle from 700 KB to 140 KB (approximately 80%) through code splitting, lazy loading, targeted refactoring, and bundle analysis.

SELECTED IMPACT 8+ production admin panels and landing pages | 10+ feature modules | approximately 80% bundle reduction

TECHNICAL SKILLS

Core: HTML5, CSS3, JavaScript (ES6+), TypeScript

Frameworks/Libraries: React, Next.js (App Router, Pages Router, SSR, SSG, SEO), Redux, Redux Toolkit, Zustand, RTK Query, React Query, React Hook Form, Zod, next-intl, Socket.IO

Styling: Tailwind CSS, Sass/SCSS, Styled Components, shadcn/ui, Radix UI, Material UI, Ant Design

Tools: Git, GitHub, GitLab, Storybook, Turborepo, NX, Figma, Docker, CI/CD, Sentry, Postman, Swagger

Testing/Performance: Jest, React Testing Library, Lighthouse, code splitting, lazy loading, memoization, bundle analysis

Frontend Practices: Responsive Web Design, REST API integration, RBAC, JWT/OAuth, PWA, Service Workers, feature-based architecture, monorepo, component-driven development, i18n/localization

PROFESSIONAL EXPERIENCE

Bareach | Mar 2026 - Present

Front-End Developer | Tehran, Iran

- Develop and maintain a transportation operations dashboard with Next.js App Router and TypeScript, translating complex workflows into a feature-based frontend with 10+ independently maintainable modules.
- Design multi-step dynamic forms with React Hook Form and Zod, using shared validation patterns to keep field behavior consistent across critical operational flows.
- Manage server and client state with React Query and Zustand, supporting reliable API synchronization and predictable UI updates across dashboard modules.
- Strengthen production reliability and access control through RBAC guards, Sentry monitoring, next-intl localization, and base unit tests with Jest and React Testing Library.

Arshco | Dec 2021 - Mar 2026

Front-End Developer (promoted from Intern in 6 months) | Tehran, Iran

- Promoted from Front-End Intern to Front-End Developer after six months and continued contributing across a four-year tenure.
- Built and maintained 8+ production admin panels and landing pages while working directly with backend engineers and product owners to deliver scoped features.
- Developed reusable UI component libraries that standardized interaction and visual patterns across products and simplified implementation of recurring interfaces.
- Integrated REST APIs and implemented authentication and authorization workflows with JWT and OAuth across multiple production applications.

EDUCATION

Shamsipour Technical and Vocational College | Bachelor of Science in Computer Engineering (in progress)

SELECTED PROJECTS

BizMLM - Network Marketing & Commerce Platform | bizmlm.ir

Large multi-area platform spanning an admin panel, user dashboard, academy, e-commerce shop, articles, and real-time product experiences.

- Contributed across 6+ frontend modules inside a Turborepo monorepo; migrated legacy pages to a modern Next.js architecture, implemented next-intl localization, and documented reusable UI components in Storybook.
- Reduced the client bundle from 700 KB to 140 KB (approximately 80%) through code splitting, lazy loading, targeted refactoring, and deep bundle analysis, improving initial delivery efficiency.

Tech Stack: Next.js Pages Router, TypeScript, Redux, Styled Components, Turborepo, Socket.IO, Storybook, ECharts, GSAP, PWA.

Eqipo - Real Estate Crowdfunding Platform | eqipo.ir

Real-estate crowdfunding product combining public acquisition pages, investor-facing workflows, an authenticated dashboard, and editorial content.

- Built responsive landing, dashboard, blog, and content experiences with a consistent component system across public and authenticated areas.
- Implemented RBAC for permission-based workflows, rich investment-data tables with sorting, filtering, and pagination, plus PWA service workers and offline support.

Tech Stack: Next.js App Router, TypeScript, Tailwind CSS, Redux Toolkit, Radix UI, React Table, Framer Motion, PWA.

Bareach - Transportation Operations Dashboard | bareach.com

Operational transportation dashboard with complex workflows, dynamic forms, permission-sensitive modules, synchronized API data, and production observability requirements.

- Architected 10+ feature modules and implemented dynamic multi-step forms with shared Zod validation, while coordinating server and client state through React Query and Zustand.
- Added RBAC guards, Sentry monitoring, next-intl localization, Framer Motion interactions, and critical component tests to support a secure and maintainable production experience.

Tech Stack: Next.js App Router, TypeScript, Tailwind CSS, shadcn/ui, React Hook Form, Zod, React Query, Zustand, Sentry, Jest, React Testing Library.

Greenkeeper - Environmental Certificate Platform | greenkeeper.eco

International environmental certificate platform with distinct user, administrator, organization, and public landing experiences connected to a microservice backend.

- Developed four product areas and a reusable Tailwind CSS and shadcn/ui component foundation, maintaining consistent behavior across different user roles.
- Integrated multiple backend services with RTK Query and delivered German and English localization for international product and content flows.

Tech Stack: Next.js Pages Router, TypeScript, Tailwind CSS, shadcn/ui, Redux, RTK Query, Framer Motion, microservice architecture.

Royan Cancer - Medical Research Institute Website | royancancer.org/

Public-facing medical research website focused on discoverability, readable content presentation, responsive behavior, and maintainable article publishing.

- Built responsive landing and dynamic article listing/detail pages with server-side rendering, structured content handling, and maintainable page composition.
- Applied accessible layout patterns and SSR to support readable experiences across devices, stronger search visibility, and faster initial content rendering.

Tech Stack: Next.js App Router, Tailwind CSS, server-side rendering, dynamic content.
